

**Weekly Records**  
Period: Feb 2020-Feb 2021

The graph displays the weekly record of COVID-19 infections per 100,000 people. The y-axis represents the infection rate, ranging from 0 to 200. The x-axis shows the date from December 2019 to February 2021. The data shows a period of low infection rates (below 25) from December 2019 through June 2020. A significant increase begins in late 2020, peaking at approximately 195 infections per 100,000 in late December 2020. Following the peak, the infection rate declines sharply, reaching about 58 by early February 2021.
